ZERO WASTE PROGRAM

At **monkeyglasses™** most of the surplus material from the production of our glasses, is recycled and made into our cool accessories. For example, surplus material is turned into an acetate ring fitted with a leather cord that you can attach your glasses to. The same material is also used to produce finger rings and latest bracelets in different colors.

SUSTAINABILITY AT FIRST SIGHT

MonkeyGlasses have the environment and people in their sights and a focus on zero wastage. The unique frames are made from cotton fibres, and any residue is recycled into trendy accessories, while old glasses are re-used.

Looking good, seeing good and doing good all at the same time is easy.

Biodegradable Cotton Material

Most of our glasses are made of cotton acetate. The raw material is biodegradable and comes from Italy.

ZERO WASTE

A program, which means that leftover material from our production of glasses is used to produce accessories.

We Collect Old Glasses

Return your old glasses to us instead of throwing them away. We deliver used glasses to a centre in Trivandrum, India that supports fishing families in need.

100% Organic Bags

monkeyglasses™ come in a fabric bag made of 100 % organic cotton or in a hard box case, made of cardboard.

We Support

monkeyglasses™, support Save the Orangutan that fights for the survival of the orangutan and the rainforests of Borneo.
